

DONIFLEX® G-MD

DONIFLEX® G-MD is an advanced composite material based on graphite and aramid manufactured under organic solvent-free conditions. DONIFLEX® G-MD combines the advantages of the chemical and thermal resistance of graphite with the strength of aramid. This "medium density" material has good stress resistance for gaskets with narrow-width. It is particularly suitable for steam and hot water supplies as well as for boilers and radiators.

P-T diagrams indicate the maximum permissible combination of internal pressure and service temperature which can be simultaneously applied for a given gasket according its material type, thickness, size and tightness class. Given the wide variety of gasket applications and service conditions, these values should only be regarded as guidance for the proper gasket assembly. In general, thinner gaskets exhibit better P-T properties.
